Technical Skills

- **Languages & Frameworks:** TypeScript, JavaScript, Java, NestJS, Node.js, React, Angular, Groovy/Spring Boot.
- **Databases:** PostgreSQL, Prisma, relational modeling, migrations, SQL, MongoDB, SQL Server, Db2, Oracle.
- **Cloud & DevOps:** AWS, Aurora PostgreSQL, ECS/CDK, Azure, Docker, OpenShift, CI/CD.
- **APIs & Architecture:** REST APIs, B2B SaaS, microservices, system integration, historical pricing and data ingestion.
- **Methodologies:** Spec-driven and AI-assisted development, technical shaping, TDD, code reviews, Agile / Scrum.
- **Collaboration:** Architecture specifications, client communication, cross-functional delivery, onboarding.
- **Certification:** Red Hat OpenShift Delivery Specialist.

Experience

Principal Software Engineer, Fidelity Investments | Labs
February 2026 – Present
Tech: TypeScript, NestJS, Node.js, PostgreSQL, Prisma, AWS, React, Vite
Tools: Jira, Confluence, Git, CI/CD pipelines

- Build an early-stage B2B crypto asset platform supporting wallet/account tracking, compliance, financial planning, and asset verification.
- Piloted spec-driven development for historical pricing: wrote business and architecture requirements and approximately ten Jira specifications for AI-assisted implementation under engineering review.
- Led design and delivery of a historical pricing API, shaping technical work, sequencing implementation, and coordinating across teams.
- Implemented an approximately eight-year data backfill and hourly price updates for the top 200 crypto assets, with allowlisting for additional assets.
- Introduced PostgreSQL storage using Prisma models and migrations; worked with Aurora PostgreSQL, ECS/CDK deployment, and IAM database authentication.
- Led a secondary CoinGecko pricing integration; defined API contracts for downstream consumers and contributed React/Vite dashboard features for digital-asset review.
- Collaborated with engineering, product, and stakeholders in a client-facing environment; helped onboard engineers and shared project context.

Software Engineer, NIQ (NielsenIQ) | BASES Platform
April 2022 – February 2026
Tech: Groovy, Spring Boot, Angular, Ember.js, MongoDB, SQL Server, Azure, Docker
Tools: Jira, Confluence, Git, Azure Devops

- Modernized Groovy/Spring Boot APIs and optimized data access and complex queries across MongoDB and SQL Server.
- Supported migration of SaaS microservices to Azure, including Docker containerization and CI/CD configuration.
- Independently migrated the final approximately six legacy features to Angular, enabling retirement of the legacy product.
- Built reusable Angular components and configurable, product-agnostic functionality to reduce duplication and repeated data fetching.
- Created interactive D3.js visualizations and reporting for consumer research and product-testing analytics.

Systems Engineer, IBM | Maximo
June 2020 – April 2022
Tech: DB2, Oracle, WebSphere, OpenShift, MongoDB, Kafka
Tools: Salesforce Service Cloud, Git, Jenkins

- Investigated enterprise Maximo production incidents, coordinated client communication and escalation, and documented resolutions.
- Diagnosed complex application, data, configuration, and integration issues across enterprise customer environments.
- Partnered with product engineers to reproduce critical bugs, trace application behavior, and identify code-level patch requirements.
- Automated repeatable support and data-repair tasks using complex SQL and shell scripting.
- Created internal and customer-facing technical documentation to improve supportability and knowledge transfer.
- Supported private-sector, government, and defense customers with stringent data-handling requirements.

Systems Administrator, IBM | Maximo
June 2019 – June 2020
Tech: DB2, Oracle, SQL Server, Linux/Windows VMs
Tools: Jira, Git, VMware

- Provisioned and maintained virtualized test environments for multiple Maximo product teams.
- Wrote and tuned complex SQL across large Db2 and Oracle schemas containing hundreds of tables.
- Customized Maximo builds for customer requirements and deployed through controlled test and production environments.
- Standardized VM templates to streamline provisioning and support cross-platform testing.

Education

Worcester State University, Worcester, MA
Bachelor's Degree in Computer Science

- Computer Science major with concentrations in Big Data Analytics and Bioinformatics.
- Dean’s List student with a 3.6 overall GPA.
- Member of Upsilon Pi Epsilon Computer Science Honor Society.
- Member of Phi Eta Sigma National Honors Society.
- Treasurer of Worcester State University’s Tae Kwon Do club.

National University of Ireland, Galway

- Studied at NUI Galway through Worcester State University’s Study Abroad Program.
